

ENGRAVING

AlfaBTag is a LogoTag CAD program option offering 2 and 3-dimensional character engraving and completely free 2-3-4 axis engraving on flat surfaces or any section.

AlfaBTag can be applied to any operator-generated engraving profile or LogoTag font, controlling contouring planes (G17, G18, G19, etc..) on which Work and Tool Speeds are defined. Machining can be performed by layer, dividing the project up into single work areas.

Simulations and removal technologies define the details of each engraving cut.
